

Sri Lanka Institute of Information Technology

Emergency Response Plan

January 2025 Edition

Table of Contents	ii - iv
Glossary of Terms and Abbreviations	v - vii
Preface	viii
1. INTRODUCTION	1
2. PURPOSE	1
3. SCOPE	2
4. LEVELS OF EMERGENCIES	2
5. ORGANIZATIONAL STRUCTURE	2-3
6. SITUATION AND ASSUMPTIONS	3-4
6.1. Situation	3-4
6.2. Assumptions	3-4
6.3. Government and other Emergency Services Involvement	4
6.4. Awareness and Training	4
6.5. Hazard Analysis and Assessment	4
7. CONCEPT OF OPERATION	5
7.1 General	5
7.2 Emergency Operational Management Structure	5
7.3 Incident Command System	5-6
7.4 Emergency Operation Centre	7
7.5 Organizational Responsibilities	7
7.5.1 Campus Safety and Security Unit	7-9
7.5.2 Emergency Response Teams	9
7.5.3 Facility Management Unit	9
7.5.4 Faculty/Department General Responsibilities	9-10
7.5.5 Specific Faculty/ Department Responsibilities	10
7.5.6 Administration and Logistics	10-11
7.5.7 Notification of Emergency	11
7.5.8 Declaration of State of Emergency	11
7.5.9 Media and Public Information	11
7.5.10 Deactivation of State of Emergency	11-12
7.6 After Action Procedure of an Emergency	12
7.6.1 Administration Support	12
7.6.2 The Action ERT	12
7.6.3 After Action report	12
8. EMERGENCY RESPONSE PLANS	13
8.1 Introduction	13
8.2 Emergency Response Plan - 1- Fire, Explosion	13

8.2.1	Fire Emergency	13
8.2.2	Fire Extinguishers, Fire Alarm and Manual Call Points	13
8.2.3	Action to be taken when a fire is detected	13-14
8.2.4	How to use Fire Extinguishers, “PASS”	13
8.2.5	Responsibilities of Fire Wardens	14
8.2.6	Fire Extinguishers and Maintenance	15
8.2.7	Explosion	15
8.3	Emergency Response Plan - 2 - Bomb Threats and Suspicious Packages	15-16
8.3.1	Response to Telephone Bomb Threats	16
8.3.2	Bomb Threats via Written Warning	16-17
8.3.3	Response to Suspicious Mail or Packages	17
8.3.4	Physical Characteristics of Suspicious Packages/Letter	17
8.4	Emergency Response Plan - 3- Use of Firearm/ Lethal Weapon Incident	17-18
8.5	Emergency Response Plan - 4 - Hostage Situation	18-19
8.6	Emergency Response Plan - 5 - Chemical or Gas Release, Uncontrolled Chemical Reactions, Undue Exposures, and other Hazards	19
8.6.1	Hazardous Chemical and Waste Exposure Prevention	19
8.6.2	Safety Showers and Eye Washers	20
8.6.3	Laboratory Spill Kits	20
8.6.4	First Aid Kits	20
8.6.5	Responsibilities of the Lab in Charge / Assistance	21
8.6.6	Responsibilities of Members/ Users	21-22
8.7	Emergency Response Plan - 6 - Civil Disturbance or Demonstrations	22
8.8	Emergency Response Plan - 7 - Severe Weather Condition (Storm, flood)	22-23
8.9	Emergency Response Plan - 8 - Medical Emergencies	23
8.9.1	Response to Minor Injuries/Illnesses	23
8.9.2	Response to Serious Injuries/Illnesses	23
8.10	Emergency Response Plan - 9 - Psychological Issues	24
8.10.1	How to Identify the Symptoms	24
8.10.2	Response to Situations	24
8.10.3	How to deal with Psychological Crisis	24
8.11	Emergency Response Plan – 10 - Building Evacuations	24-25

Annexes

“A” - Categories of Threats based on Levels of Emergencies	26-27
“B” - Concept of Operation Flow Chart	28
“C” - Emergency Notification System Flow Chart	29
“D” - Emergency Response Flow Chart	30
“E” - Emergency Contact Resource Directory	31-32

GLOSSARY OF TERMS AND ABBREVIATIONS

AAR: After-Action Report

AP: (Assembly Point) A predesignated location inside or open-air location for all injured or others evacuated from the incident location or building. They will temporarily hold for a count and for first aid. Ideally it should be at least 300 feet away from the scene.

CAHM: Colombo Academy of Hotel Management

CAAO: Chief Academic Affairs Officer

CEO: Chief Executive Officer

CFO: Chief Financial Officer

CSSU: Campus Safety and Security Unit

CSSOO: Chief Student Services and Outreach Officer

CTO: Chief Technology Officer

DFM: Director Facility Management

DHC: Director of Human Capital

Disaster: A disaster is a serious incident occurring over a short or long period of time that causes widespread human, material, economic or environmental loss which exceeds the ability of the affected community or society to cope using its own resources.

DMC: Disaster Management Centre

Emergency: That creates an imminent risk to the lives of visitors and creates an imminent risk to property and personal property located on the premises.

EMS: Emergency Medical Support

EOC: (Emergency Operation Center) The physical location at which the coordination of information and resources to support an emergency response takes place.

ERPSI: Emergency Response Plan for Specific Incident

ERP: (Emergency Response Plan): This plan describes the structure and process, detailed actions to follow in the event of a specific emergency and explains the specific and specialized application required to control before or after the incident.

ERO: (Emergency Response Officer) Authorize officer within the institution to direct/control the actions during an emergency.

ERT: (Emergency Response Team) A team organized with the dedicated members or selected staff of the campus administration and responsible for specific emergency support functions.

FMU: Facility Management Unit

Hazard: A hazard is a potential source of harm, substance, events, or circumstance that can cause damage to health, life, property, or any other interest of value.

Hazmat: A hazardous material is any item or agent (biological, chemical, radiological, or physical) which has the potential to cause harm to humans, animals, or environment either by or through interaction with other factors.

ICS: (Incident Command System) A typical structure developed for emergency management used by all local response agencies during emergency response and support.

IC: (Incident Commander) Is the officer responsible in charge with the overall authority of conducting the impending operations for the management of all incidents related operations on the scene of an emergency. The Fire official or Police official may take over the responsibility depending on the level of emergency or hazard.

MD: Managing Director

Non-Violent Disruptive Demonstrations: The demonstration of these kinds blocks access to university facilities or interferes with the operation of the campus.

PVC: Pro Vice Chancellor

SMT: Senior Management Team

OIC: Officer in Charge

Peaceful, Non-Obstructive Demonstrations: Demonstrations that do not affect campus activities as normally as possible.

SDVC & PRO: Senior Deputy Vice Chancellor and Provost

SDA: Senior Director Administration

Safety: Is the state of being protected from harm or other danger.

Security: The state of being away from hazards caused by deliberate intention of human to cause harm.

SOP: Standard Operation Procedure

Violent Disruptive Demonstrations: A violent demonstration in which an injury to a person or property occurs or appears is imminent.

PREFACE

Emergency response effort shall be conducted in order to protect the Core Values of Sri Lanka Institute of Information Technology (SLIIT) with the approval of MD/CEO in consultation with the Senior Management Team.

Sri Lanka Institute of Information Technology apply following phases of emergency management cycle to mitigate or control emergency/hazardous situations:

- **Prevention and Mitigation** - The process of strong analysis to identify the potential threats, hazards, high risk areas and developing or improving response plans to assure an orderly and effective response during an emergency while mitigating the areas of vulnerability.
- **Preparedness** – In this stage it is important to be skilled in training staff and students as appropriately to respond to the disaster. Stay organized, which is the best way to ensure readiness.
- **Response** – Is the reaction to an incident or emergency to assess the level of containment and control activities that may be necessary. After every execution of the Emergency Response Plan (ERP) an after-action review needs to be performed to determine whether the response was effective or any changes to the plan should be introduced. During this phase campus priorities will be to assure the whole staff, students, visitors safety, protect critical infrastructure and provide maximum possible support to emergency response organizations/ operations.
- **Recovery and Restoration** – Is the process of planning for implementing the recovery of non-critical academic process at the initial stage and functions the critical campus operations that will allow the campus to return to a normal service level.

Due to the unpredictable nature of emergencies, this Emergency Response Plan (ERP) will be organized according to general directions, notification, response guidelines followed by sections containing specific response strategies pertinent to different kinds of emergencies where appropriate.

No plan can cover all contingencies unless the Emergency Response Officer (ERO) and members of the Emergency Response Team (ERT) are empowered with authority to commensurate with their responsibility to protect life and property and to employ strategies not specified in the Emergency Response Plan.

1. INTRODUCTION

The Emergency Response Plan (ERP) of Sri Lanka Institute of Information Technology is designed to serve as a guideline for that of those who are vulnerable such as staff, students, visitors, faculties, property from natural and manmade hazards and responding to any emergency that could or does affect the campus function.

The ERP can apply during any man made and natural disaster, including but not limited to natural disasters, power failures, hazardous material releases and civil disturbances. The ERP is designed with an operational structure and outlines basic operational procedures that are suitable to deal with and direct those individuals and departments that may be called upon to assist in an emergency response activity. Further ERP will help to ensure that the campus response to an emergency is prompt, professional and well-coordinated.

2. PURPOSE

The primary purpose of the ERP is to outline the organizational structure, responsibilities, procedures, guiding policies and good practices to protect the lives of staff, students at Sri Lanka Institute of Information Technology when responding to emergency or otherwise. Further initiating, coordinating, and sustaining an effective campus response to any emergency to maintain the continuity of mission essential functions.

The ERP is designed to:

- Address range of natural and manmade hazards that could affect the function of the campus.
- Identify necessary planning assumptions and develop policies.
- Establish a concept of operations which could coordinate a timely and effective response mechanism within interdepartmental/faculties.
- Assigning specific functional responsibilities to the appropriate offices and departments.
- Coordinate the support necessary to respond of the campus, local and government agencies, and other supporting institutions actions during an emergency.

3. SCOPE

The Scope of the ERP is as follows:

This ERP is a local plan covering all offices, departments, personnel, buildings, and other facilities operated by SLIIT in its Malabe premises. Further particular departments/ faculties are charged with the responsibility to provide response and recovery actions in an emergency or disaster situation.

Response activities include those actions that support the efforts of campus, local and other government agencies described in ERP are carried out under the authority of the MD/CEO.

4. LEVELS OF EMERGENCIES

Any kind of emergencies and events that affect the function of the campus, large or small scale, are included in the framework of this plan. The level of emergency will determine the extent to which the plan is utilized, and resources are mobilized.

- **Level 1:** Is a minor incident, potential or actual, involving a department or building that can be handled by the affected department/faculty with the existing campus resources. The assistance required is very minimal and usually a single event with limited impact.
- **Level 2:** Is a critical event that could be potential or actual, affecting an entire building or buildings which disrupts the overall operation of the campus. It could be a single or multi hazard situation. The local or government emergency services will probably be required.
- **Level 3:** Is a major event of significant or catastrophic proportions involving the entire campus or a significant portion of the campus and the surrounding community. Immediate suppression may not be probable and is well beyond the response capabilities of the campus.

(See Annex “A” to Categories of Threats based on Levels of Emergencies)

5. ORGANIZATIONAL STRUCTURE

5.1 This structure ensures a **clear chain of command, resource coordination, and effective communication** during an emergency.

- **Strategic Level** – The University’s Senior Management Team provides strategic leadership and sets high-level priorities for the coordination of response, policy direction and guidance and delegates temporary authorities to support the development and implementation of response and recovery strategies.

- **Operational Level** – The Emergency Operation Centre (EOC) is led by the Director CSSU and comprised of Heads of Units, typically at the Director level. It provides operational leadership and coordination by establishing situational awareness, developing response and recovery strategies in line with respective Emergency Response Plan.
- **Tactical Level** – The following designates provide tactical leadership and coordination at the scene(s) by developing required tactics to implement response-and-recovery strategies and EOC Action Plans.
 - **Emergency Response Officer:** The ERO acts as the overall head of the ERT and has delegated authority to manage the emergency response including assigning responsibilities to other critical functions. He is responsible for higher management and oversight of the emergency response.
 - **Emergency Response Team:** The ERT is a dedicated team comprised of selected campus staff members or specially enlisted members with good knowledge, training to handle potential hazards within the campus with selected leadership and responsible for specific emergency support functions 24/7 basis.
 - **Incident Commander:** Is the responsible officer in charge of overall authority of conducting the impending operations for the management of all incidents and related operations in the scene of an emergency.

6. SITUATION AND ASSUMPTIONS

6.1. Situation

Sri Lanka Institute of Information Technology is in the suburb of Malabe and Kaduwela towns in Colombo District, Western Province. The campus covers about 25 acres of land and has six buildings which include three high-rise buildings (Main Building, FOE Building, New Academic Building) and SLIIT Business School, CAHM, and Hostel Building. There are nearly 20000 enrolled students and around 5000 to 6000 students are present at any given time on working days. The function of the campus is backed by over 800 full time and part time academic and nonacademic staff members.

The other activities and programs are enriched with routine conferences, seminars, ceremonies, sports events, social and cultural events, lab experiments and other events which bring an additional population and visitors to the campus. The campus is located at a reachable distance within 45 minutes from commercial city, Colombo, where most of the emergency support services are located. The available infrastructure facilities carry a kind of risk and expose to natural hazards, disasters, technological, chemical, security, safety, and for human emergencies.

6.2. Assumptions

During an emergency **quick evaluation of the situation** is more important to deploy the available resources as a means of quick response. Thus, **coordination and mobilization of the resources on time** is the responsibility of the campus. Depending on the **level of emergency and the requirement of resources**, the campus should activate the ERP to direct its resources to protect the lives and property in the best possible way and to ensure the normal function of the campus operations.

In some situations, emergencies/hazards and disasters that happened in suburb areas may affect the function of the campus creating more complex situations. Then obtaining the other emergency service assistance may be difficult or not at all possible. Therefore, the campus must have a plan to react appropriately with or without the immediate involvement of outside stakeholders. Further emergencies or **disasters can occur at any time of the day or night** and can occur when the Senior Management Team members are unavailable at the site to respond. Therefore, the ERP must be a flexible one to apply for varying situations.

6.2.1 Government and other Emergency Services Involvement

The Local Government Authorities, Provincial Councils and Town Councils' involvement with available resources also may possibly depend on the level of the emergency. They have direct control of emergency management within their jurisdiction and with the implementation of the emergency management program designed to provide for an effective response to an emergency.

Then the OIC Police or Fire Department Head, Emergency Response officials of different agencies may take over command and the responsibility to control the incident. There he serves in the role of the Incident Commander. The Incident Commander is also responsible for limiting or closure of access to a building or area to anyone, even to senior campus officials, if the situation warrants.

6.2.2 Awareness and Training

Awareness of the ERP is an essential aspect to comply with and familiarization through awareness programs and training sessions is a continuous process.

6.2.3 Hazard Analysis and Assessment

Each department, faculty, or office at Sri Lanka Institute of Information Technology is responsible to conduct its own hazard analysis and assessment concerning the area that they dealt with. There after those concerns should further assess with the Senior Risk Manager for possible mitigation action or solutions,

7. CONCEPT OF OPERATIONS

7.1. General

The **Concept of Operation** for SLIIT's **Emergency Response Plan (ERP)** outlines the structured approach to managing emergencies, ensuring a swift, coordinated, and effective response to protect students, staff, and campus assets. The institution is responsible for ensuring, preparing to meet and accommodate the needs of the campus community that might be affected during an emergency. It includes:

- **Activation & Command Structure** – Emergency situations are identified and reported to the **Campus Safety and Security Unit (CSSU)**, which activates the ERP. The **Incident Commander (IC)**, usually the Director of CSSU or a designated officer, takes charge.
- **Emergency Classification & Response** – Emergencies are categorized (e.g., fire, medical, security threats, natural disasters) with predefined response actions. First responders, including security personnel and trained staff, execute immediate containment and evacuation measures.
- **Communication & Coordination** – A structured **Incident Communication Plan** ensures rapid information dissemination between **CSSU, faculty, administration, external emergency services (fire brigade, police, medical teams), and the SLIIT community.**
- **Evacuation & Shelter Protocols** – Evacuation routes, assembly points, and emergency shelters are clearly designated. Campus-wide drills are conducted periodically to ensure preparedness.
- **Medical & First Aid Support** – First aid stations, trained personnel, and designated medical response teams handle casualties until external emergency medical services arrive.
- **Post-Incident Recovery & Reporting** – After an emergency, an **After-Action Review (AAR)** is conducted to assess response effectiveness, address gaps, and refine the ERP.

This structured approach ensures SLIIT remains **prepare, mitigate, respond and recover** from emergencies efficiently.

The activation of the ERP requires the direction of the ERO/IC or his appointee depending on the level of emergency. The SMT support offices and department will follow situations to identify the requirements and resources needed to support the effort appropriately.

The ERT will gather the necessary information and resources required to oversee the campus response to the emergency if it cannot cope up with available resources. The ERT is, in turn, supported by the faculties and departments that implement their own emergency response actions under overall coordination of the ERO.

The MD/CEO is the highest authority to declare a **Campus State of Emergency** or rest with his delegate. The declaration may be made on the recommendation of the Emergency Response Officer or other ERT members. In this endeavor the MD/CEO is supported in this responsibility by the SMT or for the purpose of management of the emergency.

(See Annex “B” to Concept of Operation Flow Chart)

7.2 Emergency Operations Management Structure

Senior Management Team

- SDVC & PRO
- PVCs
- Deans
- CAAO
- CSSOO
- CFA
- CTO
- SDA
- DHCM

Any other member from SMT as the situation demands.

Director CSSU
Director FMU
Emergency Response Officer
Emergency Response Team
Incident Commander

7.3 Incident Command System – (ICS)

The Incident Command System (ICS) is a formal structure of operations in emergency situations that is uniformly accepted and implemented by local, other agencies such as Disaster Management Centre (DMC) that have the authority and responsibility for managing emergency situations. The ICS is organized to address the primary requirements of a complex emergency under an organized chain of command.

During Level 1 and most of Level 2 emergencies on campus, the ERT can operate in a less formal mode. However, in a largescale emergency involving outside agencies from the local and government agencies responding to campus to assist in addressing a major event, the ERT must be able to interface with these outside agencies hence all of which will be operating entirely under the ICS model.

7.4. Emergency Operation Center (EOC)

When an emergency occurs or is imminent, it shall be the responsibility of the Emergency Response Office (ERO) to set up an appropriate Emergency Operation Center. (Command Post). Location will depend on the duration or severity of the emergency warrants setting up an EOC. It will be set up in a location best fitting the situation. The key element in selecting the EOC is that it is a safe location that is unlikely to be affected by any subsequent events related to an initial disaster/emergency episode.

7.5 Organizational Responsibilities

The **specific roles and actions** assigned to different **departments and faculties** to ensure a coordinated and effective response. Each unit must act swiftly according to pre-defined emergency protocols.

Fire, bomb threat, environmental hazard, serious multiple injury accidents, civil disorder or demonstration, chemical spill, hostile intruder, shooting incident, natural and manmade hazard/disaster, and utility failure are among the reasons that a building should be evacuated. Regardless of the reason for the emergency, any condition in or near a building that threatens health, safety, or welfare of any member of the campus community shall cause an evacuation. Whenever a campus building is evacuated, it is the individual responsibility of occupants to report to the assembly point designated by their faculty/department/office immediately.

7.5.1 Campus Security and Safety Unit

CSSU upon receiving information about an occurring or likely emergency, shall gather as much information as possible and immediately communicate to ERO, or any member of the ERT and followed by following actions for all emergency situations including but not limited to:

- Depending on the level of emergency, contact and request all necessary agencies such as Police and Fire Emergency Response Agency responders as appropriately.
- Shall direct the immediate response of emergency assistance (Police, Fire, Ambulance) based on the outcome of the emergency. (Building, fire, environmental hazard etc.)
- In the event of a Level 2 or 3 emergency, notify the SDVC & P/ Director FM or duty supervisor FM.
- In the event of Level 3 emergency, the Director, CSSU or his designee will update the situation and advise the MD/CEO and appropriate Leadership Team Members.

➤ Access Control

Restricting access to campus is important during a level 3 emergency to avoid unwanted suffering and only the most essential faculty, staff, and affiliates such as maintenance staff, other service staff are authorized to be present on campus that will be determined by Director, CSSU.

Those faculty staff and staff members who have been assigned to support ERT duties or issued an emergency pass by the CSSU will be allowed to enter the immediate disaster site.

➤ **Assessment of the Emergency**

During a state of emergency, the CSSU with the ERT shall take the necessary steps to assess the emergency and to safeguard people and property. The Director CSSU or designee shall immediately consult the ERT on the assessment of the emergency and level of emergency and possible recommendation for a declaration of a campus state of emergency.

In the event of a major crisis emergency or potential threat occurring on the campus or one that involves campus property, the Director, FM will determine the extent of any damage to campus property.

➤ **Police, Fire, Bomb Squad, and Medical Emergency Services**

The above services will always be called in the event of fire, bomb threat, environmental hazard, serious multiple injury accidents, civil disorder or demonstration, chemical spill, hostile intruder, shooting incident, natural and manmade hazard/ disaster by CSSU.

Police and Fire Departments and other government agencies generally have emergency response strategies in place and are usually well equipped to provide immediate assistance as well as knowledge of appropriate resources for immediate assistance.

➤ **Execution of Emergency Response Plan**

Activation of the ERP is dependent on a change of conditions, such as the type, level of emergency and under the direction of Director CSSU. General assumptions are as follows:

- The ERP will be operational to address urgent requirements of a given disaster or emergency. Most suitable ERP will be activated based upon the nature and scope of the event and the level of support needed to respond.
- Based on the situation the ERT will notify campus faculties/ departments and offices regarding the activation of the appropriate functional ERP and other elements of the ERP.
- When ERP is initiated and unless otherwise specified all people having primary functions at a particular level (ERT Members/ Nominated Staff) will report to the ERO/EOC and initiate their respective functions.

(See Annex “D” to Emergency Response Flow Chart)

➤ Immediate Actions

The different kinds of serious incidents and situations demand varying types of resources to deal with emergencies. Therefore, the required assistance should be obtained accordingly by the people at the scene.

(See Annex “D” for Emergency Contact Resource Directory)

7.5.2 Emergency Response Team

The **ERT** operates under the direction of the **ERO**. The responsibility of this team is to:

- First members to enter the scene of emergency.
- Provide overall coordination to the campus’s response to the emergency.
- Obtain, confirm, evaluate, and provide information to the ERO and SMT.
- Identify and implement actions necessary to control specific situations.
- Identify resources needs and shortfalls.
- Reassign or deploy individuals and department / campus resources in support of critical needs.
- **Emergency Management:** Emergency management is vital until the situation stabilizes. This includes the assessment, calling emergency services as the situation demands, evacuation of the victims, first aid and medical assistance etc. Establishing centralized liaison to deal with outside agencies such as Police, Fire, Ambulance, Hospital, other Government Agencies, and providing with them necessary information plus other assistance.

The ERT, under the direction of the ERO, will take the lead in managing the ongoing actions taken in response to the emergency. The best use of available resources and close monitoring process to identify the needs with periodic progress report to other agents also count during emergency management.

7.5.3 Facility Management Unit

The restoration of utility and mechanical service shall be coordinated by the Director FM and handle the issues beyond the ability of them through private service contractors to rectify the problems.

Infrastructure Safety: Asses structural damage, fire hazards and electrical risks

Utility management: shutdown utilities, gas water, electricity if necessary

Support services: provide necessary tools, equipment for emergency responders

7.5.4 Faculties/ Department General Responsibilities

All campus Faculties/Departments offices shall:

- Prepare, issue, and routinely update emergency procedures that describe the responsibilities of department/office staff to handle an emergency. All such procedures should cover the safety of all students, faculty staff within the department of office during any emergency.
- Identification of “**Assembly Point**” with sufficient space, area landmark, or other readily identified alternate location on campus where students, faculty, staff are to gather immediately following a building evacuation. The assembly point is at least 300 feet away from the building.
- Accountability of all departments/office, faculty, students, and other visitors who are present at the outset of the emergency is important and initiate that accounting process immediately following a building evacuation.
- Ensure systematic sequence of personnel for all key positions to maintain operations during unforeseen.
- Maintain a system for initial status reporting on manpower and other resources.
- In the event of a potential emergency not requiring the initial involvement of local emergency services, the identifying individual, office, or department shall contact the OIC, CSSU, Maintenance Manager or ERT member.

7.5.5 **Specific Faculties/ Department Responsibilities**

Certain faculties and offices may need to develop more detailed emergency operating procedures to supplement the campus ERP because of the unique fields they engaged in such as labs containing chemicals and hazardous materials.

7.5.6 **Administration and Logistics**

Certain administration procedures and logistics should be intact prior to and during emergencies under Senior Director Administration. Hence the following applies:

- During an emergency some administrative procedures should be suspended or made optional.
- Adequate medical coverage at the initial stage of the emergency and adequate stocks of basic medicines.
- Upon activation of the ERP, each representative of the ERT ensures that students, faculty, staff, property, equipment, and supplies are accounted for and protected.
- Training of ERT members will be conducted annually through training sessions.

➤ **Mass Scale Health or Injury Situation**

The Dr Nevil Fernando Hospital is the closest hospital and it's within a very short distance and time. A list of the other facilities is included in the Emergency Contact Resources Directory. Assessment of the casualties and patients is usually the function of the First Responder, SLIIT Medical Officer and Emergency Medical Support Agencies. The follow up coordination of medical care is the responsibility of the campus Medical Unit.

7.5.7 **Notification of Emergency**

The speedy information flow on the identified emergencies may help and create conditions for immediate activation of the ERPs and quick evacuation of the affected people. It will be initially identified or received by the CSSU/ FMU. Information received by any person connected with the campus that an emergency has occurred or is likely to occur shall be forwarded immediately to a member of the CSSU. In case of serious emergency or catastrophic notification to staff, students are important and that could be arranged through a course web or bulk SMS system under the direction of the Director, Student Services Division and Director, Human Capital Management, Director Marketing.

(See Annex “C” to Emergency Notification System Flowchart)

7.5.8 **Declaration of an Emergency**

If the situation of the emergency becomes worse or it has already, the MD/CEO is the authority for the actual declaration of an emergency. He shall declare a **Campus State of Emergency** for Level 2 or 3 incidents upon recommendation of the ERO or ERT members if it is deemed necessary to do so. A declaration of an emergency will result in the immediate implementation of emergency procedure as outlined in the ERP and the closure of all or part of the campus.

7.5.9 **Media and Public Information**

An emergency or disaster is likely to disseminate very sensitive information to the public or interested parties. Dissemination of wrong information may create the situation worse. Therefore, well balance and control real time information release is critical. The function shall be the responsibility of the Director Marketing.

7.5.10 **Deactivation of State of Emergency**

The above operation is dependent upon when considering a wide range of variables that must be fulfilled. Some basic guidelines that should be followed before deactivation are enumerated below: The deactivation requires full consent from MD/CEO.

- Ensure health and safety requirements are resolved and necessary actions are taken prior to full deactivation and continue to ensure the safety of personnel and property.

- All the vital services and facilities are back to normal and operational and following actions are to be implemented by CSSU and FM.
 - Recovery operations are completed.
 - Maintain security at the incident scene physically secures the property.
 - Notify campus employees and students about the current status.
 - Keep detailed records.
 - Take photographs or videos of the damage.
 - Account for all damage-related costs.
 - Protect undamaged property.
 - Restore fire system. Participants
 - Restore power.
 - Investigate and coordinate all investigative actions with appropriate government and local agencies.
 - Take an inventory of damaged goods.
 - Restore equipment and property.
 - Assess the value of damaged property.

7.6 After Action Procedure for an Emergency

Refers to the steps taken following an emergency incident to assess the response, document key findings, and implement improvements. It ensures that lessons are learned and future responses are more effective.

7.6.1 Administration Support

The Senior Director of Administration, the CFO, CAAO, CSSO, CTO, Director, Human Capital Management follow up the support and services needed for groups and those campus personnel directly involved in the emergency.

7.6.2 The Action of ERT

Soon after the crisis is over the ERT will do an assessment of its crisis response and result as appropriate. The campus will continuously update the situation and status, the impact of the crisis on victim students and required special attention.

7.6.3 After Action Report

Immediately after the conclusion of emergency operations directly related to a critical incident, emergency, crisis or disaster, the Director CSSU will prepare an After-Action Report (AAR). The AAR will include all facts and circumstances related to incident, the quality, nature of the response effort and incident resolution and recommendation.

8. EMERGENCY RESPONSE PLANS

8.1 Introduction

The following **Emergency Response Plans** formulated as guidelines to make aware every member of the Sri Lanka Institute of Information Technology as a ready reference on how to respond in case of an emergency on the campus. Campus safety is a responsibility of all. All of us play a critical role in keeping students and staff are well safe on campus. These plans describe the type and the nature of the incident, actions/procedures to be followed before, during and after an incident as well as the response actions.

8.2 Emergency Response Plan - 1 - Fire, Explosion

8.2.1 Fire Emergency

This is a fire or the potential for a fire that may escalate beyond the ability of the local fire service resources to safely control and thereby endanger lives, property, building or the environment.

8.2.2 Fire Extinguishers, Fire Alarm and Manual Call Points

The occupant of a building/floor should have prior knowledge about the fire protection system installed in that building. Respective fire wardens nominated for each floor are responsible to make aware of its occupants. Before a fire occurs, know the location of Fire Exits, Fire extinguishers, and Fire Alarm System, Manual Call Points, Fire Points in your area and how to use them.

Fire extinguishers are primarily for defensive use. Fire extinguishers are not designed to fight fires. The extinguishers can aid in escape from the building in emergency situations when fire blocks an exit route. Fire extinguishers are located throughout the buildings and in important areas such as labs. Fire alarm call points are located throughout the facility along the emergency exit route in the facility. All staff/lab in charge/ students should familiarize themselves with locations of extinguishers and call points nearest to their work area.

8.2.3 Action to be Taken when a Fire is detected:

- Activate the fire alarm system by pushing the call point on your way out of the building.
- If a minor fire appears and controllable immediately activates the building fire alarm, then promptly direct the charge of the fire extinguisher towards the base of the flame.
- Never attempt to control a fire unless the building alarm has been sounded, the evacuation has begun, and you have the training plus ability to do so.
- If time permits, stabilize lab procedures, turn off stoves and ovens, and unplug or disable any device that could make a dangerous situation even worse.
- Close doors and windows as you leave if safe to do so. Closing doors confines the fire and reduces oxygen. Don't lock doors.

- Don't use elevators, evacuate all rooms. Leave the building by walking quickly to the nearest marked exit and alert others to do the same as you leave.
- Feel the doors before opening if door is hot don't open it.
- If smoke is present, stay near the floor where the air will be less toxic. Smoke is the greatest danger in a fire. If you are trapped keep the doors closed and place cloth under them to keep out smoke.
- Signal for help by hanging an object (e.g., A jacket or shirt) out of the window to attract attention.
- After an evacuation, once outside, report to your designated assembly point at least 300 feet away from the building. Stay there until an accurate headcount has been taken. Your department head, manager supervisor or person in charge of each office/faculty will take attendance and assist in the accounting of all building occupants.
- Notify emergency responders of anyone trapped, especially anyone with a physical disability who cannot evacuate.
- Don't reenter an evacuated building for any reason unless told to do so by the Incident Commander or CSSU, FM or All Clear is provided by the first responders or issued via campus notification system.
- In the event of a serious fire, dial 119 and notify the CSSU at **0117543116** or Ext: **3116**

8.2.4 **How to use Fire Extinguishers, "PASS".**

- **P**ull the pin.
- **A**im at the base.
- **S**queeze the operating handle.
- **S**weep from side to side.

8.2.5 **Responsibilities of Fire Wardens**

- Responsible for assessing situations to determine whether an emergency exists requiring activation of the emergency procedures.
- Overseeing emergency procedures, notifying, and coordinating with outside emergency services and directing shutdown of utilities or lab operations as necessary.
- Responsible for coordinating and conducting emergency evacuation drills with Lab Safety Officer.
- Responsible for knowing all evacuation routes.
- You must be aware of the location of all emergency call points and fire extinguishers.
- You must be aware of the location and how to use all personal safety equipment.
- Responsible for leading and coordinating emergency evacuations. The emergency coordinators have the authority to make decisions during emergencies until the first responders or CSSU assume command.
- Must follow the procedures described in the ERP.

8.2.6 Fire Extinguishers and Maintenance.

- Fire extinguishers are inspected monthly by the FM and the service contractor.
- Confirmation that the fire extinguisher is in its designated location, mounted and on a bracket.
- Confirmation that the locking pin is intact, and the tamper seal is unbroken.
- Confirmation that the pressure gauge or indicator is at full range.
- Confirmation that the extinguisher was inspected by a licensed fire extinguisher maintenance contractor within the past 6 months.
- Inspections are logged on the tag attached or stick to each fire extinguisher.
- Summary reports of all fire extinguishers in the facility are filled and maintained by the FM.
- Any problem identified during the inspection must be reported to the Director, FM.

8.2.7 Explosion

An explosion is a rapid expansion in volume associated with an extremely vigorous outward release of energy, usually with the generation of high temperatures and release of high gases, explosions created by high explosives and travel via shock waves.

In the event of an explosion on campus take the following action:

- Immediately take cover under tables, desks and other objects which will give protection against falling glass or debris.
- After the effect of the explosion and if the fire has subsided, dial CSSU on **0117543116** or Ext: **3116** and describe the nature of an emergency.
- If necessary or when directed to do so activate the fire alarm.
- When the building fire alarm is sounded or when told to leave by CSSU/ FM or Police, walk quickly to the nearest marked exit and ask others to do the same.
- Don't use elevators in case of fire. Don't panic or create in others.
- After an evacuation, once outside, report to your designated assembly point at least 300 feet away from the building. Stay there until an accurate headcount has been taken. Your department head manager supervisor or person in charge of each office/faculty will take attendance and assist in the accounting of all building occupants.
- Don't reenter an evacuated building for any reason unless told to do so by the Incident Commander or CSSU, FM or All Clear is provided by the first responders or issued via university notification system.

8.3 Emergency Response Plan - 2 - Bomb Threats and Suspicious Packages

This is not a very common threat, even though bomb threats and suspicious packages can occur on the campus. To ensure the safety of students, faculty, and staff and to minimize the disruptions by such threats, the following procedures should be followed.

- If you find a suspicious object, package, or potential bomb on campus, **DO NOT** handle the object.
- Turn off the portable/ handheld radios and cell phones nearby. Do not turn them on again until the situation has been cleared by respective emergency personnel.
- Be away from the area and immediately call CSSU on 0117543116 or Ext: **3116**.

8.3.1 Response to Telephone Bomb Threats

If you receive a bomb threat on the phone, it is imperative that you remain calm. The following questions are suggested to ask from the caller:

- When is the bomb going to explode?
- Where is it right now?
- What does it look like?
- What kind of bomb is it?
- What will cause it to explode?
- Did you place the bomb?

Keep talking to the caller as long as possible to delay any action, listen carefully and try to determine the following:

- Time of call
- Age and sex of the caller
- Speech pattern, accent, possible nationality
- Emotion state of the caller
- Background noise

Report the incident immediately to CSSU on **0117543116** or Ext: **3116** or dial 119, Army Bomb Squad 0112434251. The Police and Fire Department will handle all such threats. Evacuations will be ordered if Police or Fire officials determine that it is necessary.

8.3.2 Bomb Threats via Written Warning

If the bomb threat via a letter or note, dial CSSU **0117543116** or Ext: **3116** immediately and dial 119.

- Make use of a person that knows how to handle the note.
- Avoid excessive handling of the note, police will want to check the fingerprints.
- Follow all instructions from responding emergency personnel.
- Evacuate if ordered to do so.
- Keep the nearest Bomb Disposal Squad informed.
- Students and staff should report any suspicious object in their area to the CSSU.
- Do not touch the object.

- Until the Bomb Squad and fire officials conduct a detailed bomb search, don't open drawers, cabinets and turn on or off lights.
- If an evacuation is being ordered walk quickly to the nearest marked exit and alert others to do the same.

8.3.3 Response to Suspicious Mail or Packages

Not all dangerous packages or envelopes look suspicious and not all suspicious looking packages are dangerous. Always use your best judgment, if you are concerned for any reason, don't handle the package.

- Never open or handle any letter or package that you suspect to cause harm.
- If you come across any letter or package that consists of many of the criteria noted below, contact CSSU **0117543116** or Ext: **3116** or dial 119.
- Gently keep the package down and secure the area by closing doors, move away.
- Do not further handle the package until it has been deemed safe by responding emergency personnel. (This will keep fingerprints to a minimum and will assist the police in identifying potential offenders)
- Do not attempt to destroy the package on your own.
- Determine who else in the office or on the campus may have legitimately handled the package and be ready to communicate this information to the police.
- Evacuate the area if ordered to do so by the authorities.

8.3.4 Physical Characteristics of Suspicious Packages/Letter

- An odd smell or sounds coming from the package.
- Oily stains, leaking or seepage from the package.
- Wires extended from the package.
- Written direction indicating only a specific person is to open the package.
- Packages that are addressed to a title only, without a name or incorrect titles.
- Restrictive markings, like "**Personal**" "**Confidential**" or to be opened only by....
- Excessive use of tape or unprofessionally wrapped packages.
- A rigid or bulky envelope.
- Misspelled words, poor handwriting, printing, or typing.
- Postmark showing a very different location than return address.

8.4 Emergency Response Plan - 3 – Use of Firearm/ Lethal Weapon

If you become aware that an active firing incident is happening closer to you, by hearing gunfire or having been told about such an occurrence by another person, then your main attention should be to protect your life. If you are outside of the building and shooting happening closely or vicinity following actions to be followed.

- Run, if it is safe to do so and move far away until you are in a safe location.
- Take shelter inside the nearest building.

- If you can't avoid the threat because it's very close by to you or no building nearby, hide as best you can. Take Cover behind any hard physical cover that can provide you from direct hit of bullet or shield that provide direct view of the shooter. (A tree, wall etc.)
- If you are in the building where the bullets are coming from, get out, run, and evacuate if that is the best option and strategy.
- Leave your belongings behind. They can be collected later but not your life.
- Help others to escape and warn people about the shooting.
- As you exit the building keep your hands clear so that others will differentiate you from the shooter.
- If you can't escape hide in a place where you are well protected.
- Don't bunch together and stay parallel to the floor.
- Lock doors if you are inside a room and block entrances to prevent shooter's entry.
- Don't stay close to the windows.
- Remain calm and silent on your phone.
- Dial 119 for police assistance. Describe the shooter, location, dress, and other important information for police to identify the shooter quickly.
- Act, resist, fight as final action only when your life is imminent danger.

8.5 Emergency Response Plan - 4 - Hostage Situation

An active shooter incident should not confuse with hostage incident because in which harm is being threatened but no killing or physical harm is taking place. However, any active shooter incident can quickly transition into a hostage incident at any point during the incident,

If you hear or see a hostage situation, immediately be away from any danger and inform the Campus Security and Safety Unit on 0117543161, Ext 3161 or dial 119. Be prepared to provide following information:

- Location, building, floor, room number of incident
- Number of possible hostages and hostage takers.
- Physical description of the hostage takers, if possible.
- Any weapon or harmful item they may carry.
- Your name, contact number. Location.

➤ **If you are taken Hostage:**

- Remain calm, be polite, cooperate with hostage takers.
- Do not attempt to escape unless there is an extremely good chance of survival.
- Speak normally. Do not complain and avoid being belligerent.
- Do not draw attention to yourself with sudden body movements, statements, comments.
- Observe captors and try to memorize their traits, voice patterns, clothing or any other details that can help provide a description later.
- Avoid getting into political or ideological discussions with captors.
- Try to establish a relationship with captors, that may help you to get sympathy.
- Try to stay low to the ground or behind covers from windows or doors if possible.

➤ **In a Rescue Situation:**

- Do not run, drop to the floor, and remain still. Make no sudden moves that a responder may interpret as hostile or threatening.
- Wait for instruction and obey all instruction you are given.
- Do not upset, resist, or argue if a rescuer isn't sure whether you are a terrorist or a hostage.
- Even if you are handcuffed and searched, do not resist. You will be taken to a safe area, where proper identification and status will be determined.

8.6 Emergency Response Plan - 5 - Chemical or Gas Release, Uncontrolled Chemical Reactions, Undue Exposures, and other Hazards

A release is defined as any spilling, leaking, pumping, pouring, emitting, emptying, discharging, escaping, dumping, or disposing into the environment or any release which results in the exposure to persons within a workplace, lab or if any release escapes down the floor or sink drain or into the hall and is no longer confined to the laboratory.

8.6.1 Hazardous Chemical and Waste Exposure Prevention

All the staff members, lab technicians, assistance, team members are trained to handle hazardous chemicals and waste according to the regulations governing in Sri Lanka. Lab staff and the users are provided with chemical hygiene hazardous waste management, and emergency response training as appropriate for their job function. The following procedures are essential for further prevention of emergencies:

- Proper personal protective equipment (lab coats, gloves, and eye protection) should always be worn when working with hazardous chemicals.
- Assign contractors to perform regular inspections of the main hazardous waste, storage, discharge etc.
- Limits of quantities of hazardous chemicals stored and used at the facility by maintaining a chemical inventory that accounts for chemical quantities and limits the volumes to manageable quantities.
- Hazards are unpacked only in laboratory by qualified personnel, but not in the receiving area.
- Hazardous chemicals are manipulated only in laboratories that contain hoods and secondary containment.
- Spill kits are provided where chemicals are used, and hazardous waste is generated or stored.
- Undue exposures are controlled through the proper use and maintenance of laboratory fume hoods and personal protective equipment.
- Building evacuation drills are conducted as needed.
- Place signages/ instruction/SOPs as appropriate.

8.6.2 Safety Showers and Eye Washers

In the event of a chemical splash:

- If the chemical is compatible with water, it is important that eyes be flushed during the first few seconds following a chemical splash with containment free water if injury is minimized and prior to seeking any other medical treatment.
- Safety showers and eye washers provide a suitable means for flushing and quick drenching of the eyes and body in area corrosive materials are used.
- If possible, wipe excess material from the skin with a clean cloth before flushing the exposed area at the eyewash or safety shower for at least fifteen minutes.
- Safety showers and eye washes should be in the lab as well as in the ancillary support rooms and corridors throughout the laboratory space.
- Staff and the users of the labs should familiarize themselves with the location of safety showers and eye washers near their work area.
- In the event of accidental exposure to water reactive material, all contaminated clothing should be removed immediately.
- In the event that an excessive amount of water reactive material ignites while spilling onto clothing, dry chemical fire extinguishers should be used to quench the fire, before proceeding to the safety shower to decontaminate the impacted area.
- Safety showers and eye washers are inspected on a monthly basis by qualified contractor.
- Inspections are logged on a tag attached to each safety/eye wash as well as a summary report of all safety showers and eye washers in the facility.
- The summary reports are filled and maintained by Lab technician. Any problem identified during the inspection must be reported to the Faculty Head/Dean/FM by the contractor for immediate rectification.

8.6.3 Laboratory Spill Kits

Each laboratory contains a basic spill kit located in the cabinet under the sink. These kits contain the supplies required for the containment and cleanup of small, incidental spills of the common chemicals used in the laboratory. The content of the spill kits will be inspected monthly to check for expired materials. If a component of the spill kit has been used, it should be replaced as soon as possible.

Spill kits may also contain decontamination material in the event of a biological material spill in labs where appropriate. All spilled material must be disposed of in the appropriate waste stream for the material to be cleaned up.

8.6.4 First Aid Kits

A first aid kit should be available in the lab, in the working space. These kits contain items such as dressings and bandages, medicine for cuts and injuries, over the counter pain relievers/medications as well as gloves and other supplies. The lab staff will inspect the first aid kits contents monthly to check for expired materials and to ensure that components are replaced in a timely manner.

8.6.5 Responsibilities of the Lab in Charge / Assistance

- Responsible for ensuring all members receive initial and refresher safety training as necessary.
- Responsible for coordinating and conducting emergency evacuation drills with the Fire Wardens.
- Responsible for knowing all evacuation routes and coordinating/ modifying evacuation sweep paths for efficient and effective clearing of the building.
- You must be aware of the location of the emergency call points and fire extinguishers.
- You must be aware of the location and how to use all personal safety equipment.
- Must follow the procedures described in the ERP.

8.6.6 Responsibilities of Members/ Users

If you discover a chemical spill or release from a container, tank, or operating equipment: immediately notify the Lab Technician, Head of Department, Dean, FM and CSSU on 0117543161 or Ext: 3161. When reporting be specific about the nature of the involved material and exact location (Building Name, Room number).

- If the substance is not immediately identifiable, do not take the time to identify it. Let the qualified person handle it.
- If the spill/ release is minimal, do not push the fire alarm unless there is a fire. Attempt to stop the release at its source but assure that no danger to human health exists first. Follow the simple procedure (turning valves, plugging leaks, etc..) may be attempted if there are no health or safety hazards and there is a reasonable certainty of the origin of the leak. Don't attempt to clean up the spill.
- If there is an immediate threat to human life (fire in progress or fumes are overcoming anyone) push the fire alarm. Request the assistance of the fire department's hazardous materials response team if an uncontrollable spill has occurred and or if the spill has beyond the site boundaries.
- The key person on the site should vacate the affected area at once and seal it off by closing the doors to prevent further contamination of other areas until the arrival of fire department personnel. Then remove yourself and others from the area.
- Evacuate the building if first responders issue an evacuation order and walk quickly to the nearest marked exit while alerting others to do the same. Do not use elevators in case of fire. Do not panic or cause others to panic.
- After an evacuation when outside, report to your designated assembly point. Stay there until an accurate headcount has been taken. Your Department Head, manager, supervisor, fire warden or person in charge of each office/ area will take attendance and assist in the accounting of all building occupants.

- If anyone has contact with hazardous material, they should be isolated and await treatment by emergency personnel. Do not leave the site until you are cleared by emergency responders.
- Provide first responders with information about the spill, chemical and the spill area.
- Do not reenter an evacuated building unless told to do so by the Incident Commander or a campus official.

8.7 Emergency Response Plan - 6 - Civil Disturbance or Demonstrations

Most Campus demonstrations such as marches, meetings, picketing, rallies, and those are peaceful in nature. Always avoid provoking or obstructing demonstrators. A student demonstration will not be disrupted unless one or more of the following conditions exists because of the demonstration.

- Interference with normal operations of the campus.
- Prevention of access to offices, buildings, or other campus facilities.
- The threat of physical harm to people or damage to campus facilities.
- In the case of such demonstrations interfering with campus operations the following are to be followed:
 - Report it immediately by calling CSSU on 0117543161 or on Ext:3161.
 - A warning should be given by the officials and ask the demonstrators to disperse.
 - Alert all people around the situation.
 - Lock all doors and windows.
 - Close blinds to prevent flying glass.
 - If necessary, your department/office may decide to cease work operations until the disturbance is quit or dispersed.
 - If it is decided to evacuate your building, follow directions of the CSSU.

If the demonstrators continue in the disruptive activity, they will be advised that failure to discontinue the specified action within a determined length of time may result in disciplinary action or possible intervention by police. In extreme emergencies the MD/CEO will be consulted before such actions are taken.

8.8 Emergency Response Plan - 7 - Severe Weather Condition (Storm, Flood)

When there is a concern of inclement weather such as flood or continuous heavy rain condition campus has the right to implement its weather emergency SOP. The campus opens late, closes early, or cancels classes or are conducted in virtual mood will be decided and notified the status through the course website, SMS, Staff notice. Unless otherwise specified by the Senior Management, the campus functions with all sessions. During this period remain calm and quickly follow the steps outlined below:

- If **indoors**, seek refuge in a doorway or under a desk or table. Stay away from windows, shelves, and heavy equipment.
- If **outdoors**, move quickly away from utility poles and other structures.
- Avoid power or utility lines as they could be energized.
- Always protect yourself and be prepared for any other hazard or after effect.
- Damage facilities should be reported to the FM and CSSU.
- Evaluate the situation and if emergency help is necessary call CSSU on 0117543161 or Ext: 3161 or dial 119.

8.9 Emergency Response Plan - 8 - Medical Emergency

A medical emergency is a sudden and serious condition that requires immediate medical attention. It can pose a risk to a person's life or long-term health or cause severe pain or impairment to body functions organs or parts.

When an injury occurs, evaluate the situation, and initiate appropriate action.

8.9.1 Response to Minor Injuries/Illnesses

- In case of minor injury or illness to a person, administer basic First Aid if you know how and contact the Medical Officer. If the Medical Center is closed refer the student to the nearest local hospital.
- In case of a minor injury or illness to faculty staff, visitor to the campus, administer First Aid if you know how to control and contact the Medical Officer.
- Notify the CSSU on 0117543161 or Ext 3161 and seek assistance.
- Employees injured while working must notify their supervisor for appropriate action.

8.9.2 Response to Serious Injuries/Illnesses

- In case of serious injury or illness, immediately contact the Medical Center / CSSU on 0117543161 or Ext 316 even during non-working hours.
- Don't move a seriously injured person unless there is a life threatening situation.
- Provide CPR, if required and if you know.
- Provide contact details, as much information as possible regarding the nature of the injury or illness, whether the victim is conscious or not etc.
- Don't hang up until directed to do so by the CSSU officer. Evacuate to a nearest medical Center.
- Keep the victim as calm and comfortable as possible.
- Remain with the victim. The CSSU officer will respond immediately to the scene and will summon additional medical personnel if necessary.
- In the case of injury involving a faculty or staff member inform respective Dean/ Head and HR Division.

8.10 Emergency Response Plan - 9 - Psychological Issues

A psychological issue exists when an individual is threatening harm to himself/herself or others or is out of touch with reality due to severe drug reactions or a psychotic breakdown. A psychotic breakdown may be manifested by nightmares, uncontrollable behavior of the person.

8.10.1 How to Identify the Symptoms:

- Unusual behavior or appearance.
- Stressful event or change in relationship.
- Attempt to suicide, homicide.
- Significant change in academic performance or other activities.

8.10.2 Response to Situations:

- Offer support and assistance.
- Kindly discuss your observations and concerns.
- Speak privately as needed.
- Be caring and firm.
- Notify Student Services and Medical Officer for further action.
- Consult with on campus resources and discuss your concerns about the issue.

8.10.3 How to deal with Psychological Crisis:

- Never try to handle a situation you feel is dangerous. Don't endanger your safety.
- If you are in contact with the student who appears to be an immediate threat to his or her own safety or that of others, immediately Contact the Medical Officer or call CSSU on 0117543161 or Ext 3161.
- Clearly state that you need immediate assistance. Give your name, location (Building name, floor, room number) and briefly describe the nature of the situation.
- If it is during regular working hours, notify Student Services or Faculty Head for further action on medical care by the Campus Medical Officer or for immediate evacuation to a hospital.
- If during non-working hours call CSSU for appropriate action on 0117543161 or Ext 3161.

8.11 Emergency Response Plan - 10 - Building Evacuations

Building evacuation is the process of vacating a building to ensure the occupants safety in case of emergency. The primary goal is to evacuate occupants to a predetermined safe area away from danger, reducing the risk of injuries and fatalities. This should be an organized and swift process and implemented in circumstances where staying inside poses a significant risk such as:

- A fire: To avoid exposure to smoke, heat or flames.
- Bomb threat: To ensure safety from potential explosions.
- Hazardous Material Incident: To prevent harm from chemical spills, gas leaks, or biological threats.
- Structural Instability: To protect from building collapses due to earthquakes or damage.
- Other emergencies: such as active shooter situations, extreme weather events.

The general steps for building evacuation are:

- A building shall be evacuated by activating the fire alarm or in the event the alarm is not functioning, shout and inform the occupants to vacate.
- All building occupants are required to evacuate when the fire alarm sounds or upon the order of respective Fire Wardens or CSSU.
- Fire Wardens and CSSU officers will check to ensure that everyone has left the building.
- Depending on the time availability, before leaving, stabilize lab procedures, turn off stoves, unplug or disable any device that could make situation worse.
- Exit from the nearest exit and proceed down the fire stairs in a safe and orderly manner.
- Don't use elevators.
- After exit from the building report to the designated assembly point away from at least 300 feet away from the affected building. Stay until an accurate headcount has been taken. Your Department/Faculty Head, Manager will assist in the accounting of all building occupants.
- Inform emergency responders of trapped, especially anyone with a physical disability who can't evacuate. In emergency evacuation disabled individual should be treated as if they were injured and arrange to sit on a chair, preferably a chair with arms and follow the procedure for non - ambulatory persons.
- Check the evacuation routes for obstructions before assisting the person to exits.
- Don't go back to the building for any reason until an authorized officer or emergency responder declares it safe to enter.
- If reentry is very unlikely within a reasonable duration, faculty, students, and staff shall be directed to leave the campus.

ANNEX “A” TO
CATEGORIES/ THREATS BASED ON LEVELS OF EMERGENCIES

The following will be used to assess a threat or emergency on campus:

Natural Risks,

Level 2:

- Lightning
- Heavy Rain
- Storm

Level 3:

- Flood
- Earthquake

Manmade Risks,

Level 1/2:

- Internal Accident
- Computer viruses
- Theft/ Fraud
- Death/suicide

Level 2:

- Violence on the campus, weapon on campus
- Hazmat spill
- Bomb Threat/explosion
- Sabotage/vandalisms
- Services interruption

Level 3:

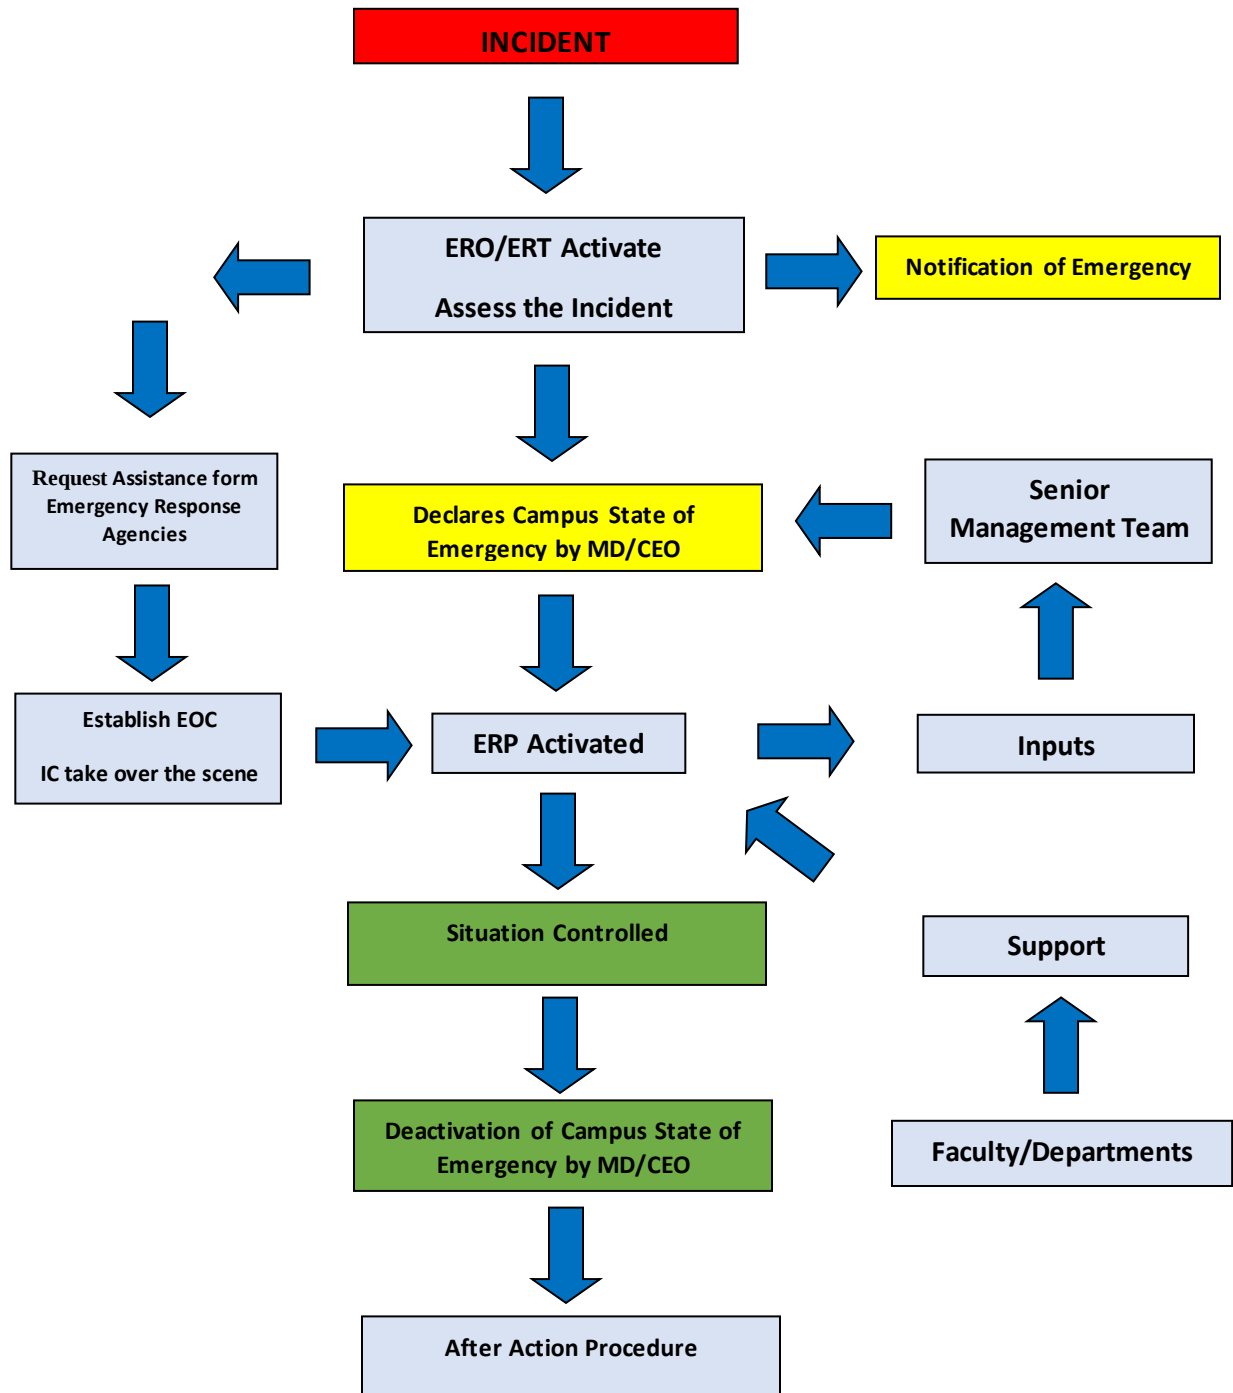

- Government State Emergency/Natural Disasters
- Terrorism/War
- Civil disturbances
- Active shooter on campus
- Hostage situation
- Heavy Fire/ serious service interruption

Other Risks:

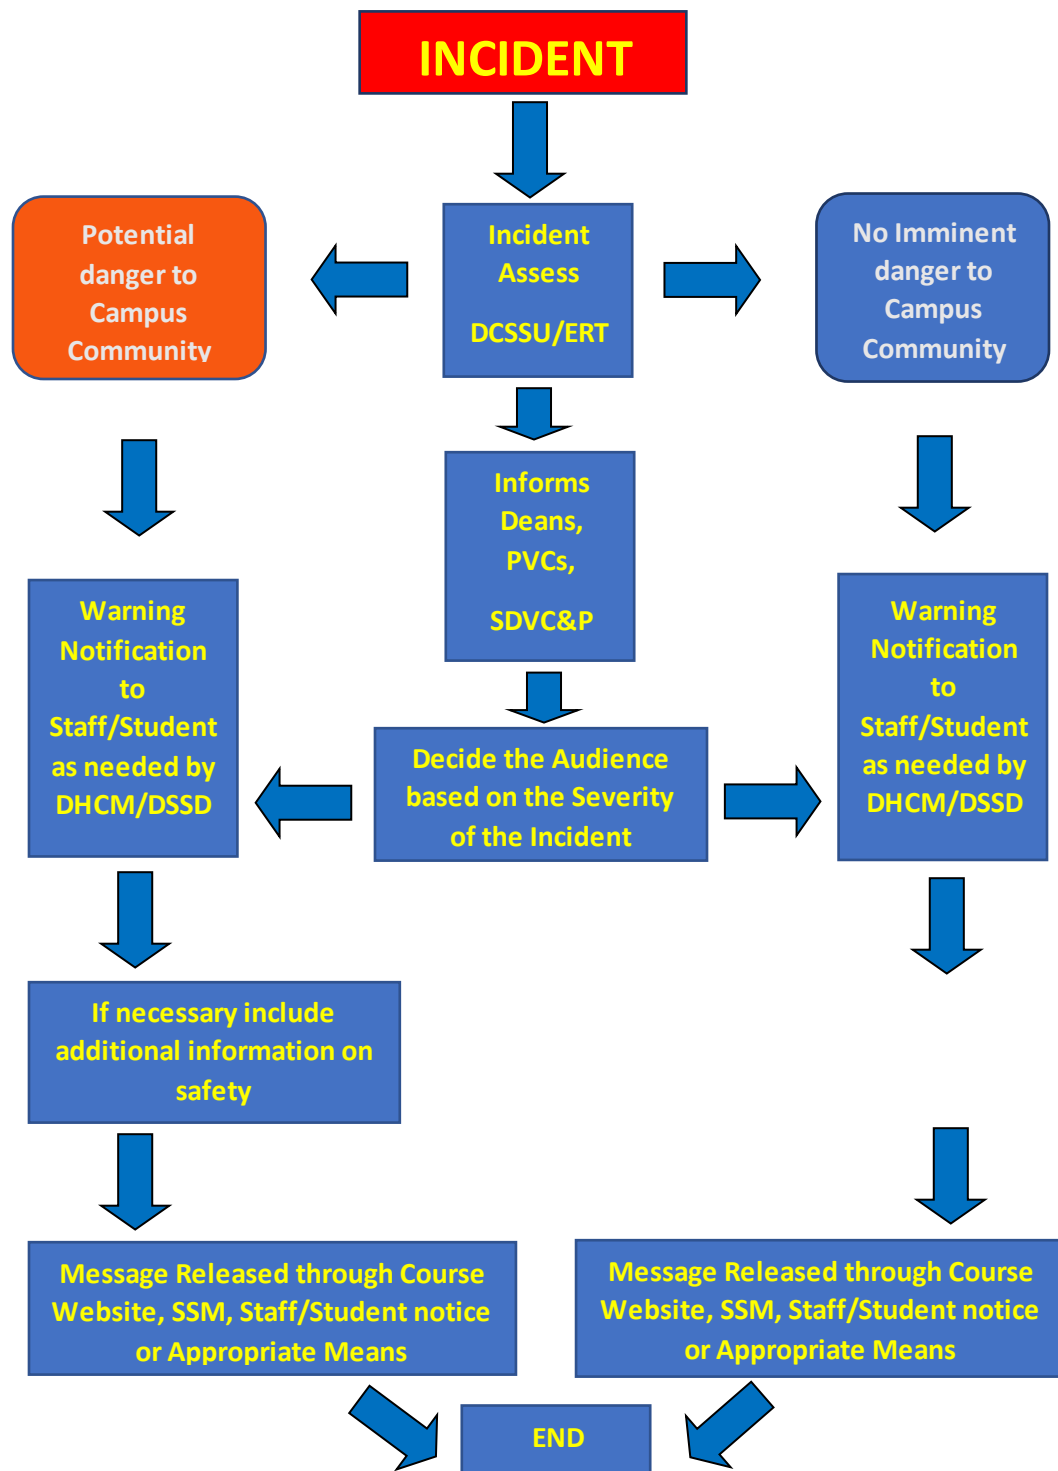

Level 3:

- Disease/Epidemic/ Health emergency
